1. Product overview

Fig.1. Remote controller MSS-AK-RC1

The Myers MSS-AK-RC1 is a wireless remote controller designed to let you arm, disarm, switch to Home mode, or trigger an SOS alert on your alarm system at the press of a button. Compact and keychain-attachable, it gives you quick, convenient control over your alarm host without needing to open the app. As a radio (RF) device, it does not connect to Wi-Fi or the app directly — it must be paired with a compatible alarm host, which receives its signal and carries out the corresponding action.

2. First use

1. Press the button with the padlock icon («Arm») on the remote controller. The alarm light starts blinking.

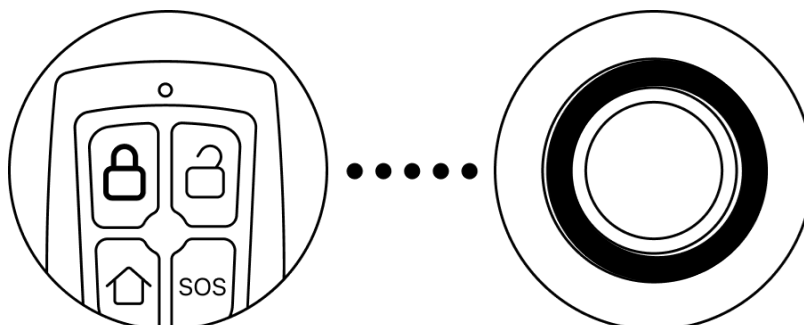

Fig.2. Testing the Arm button

3. App control

As a wireless RF device, the MSS-AK-RC1 does not connect to Wi-Fi or the app directly. It must first be paired with a compatible alarm host; the host connects to the app over Wi-Fi and forwards the remote's commands to you.

To pair the remote, put the alarm host into detector-adding mode (refer to the alarm host's manual for how to do this), then press any button on the remote controller. The remote will transmit its wireless signal to the host. The host will beep or give a voice prompt such as "Adding completed" once it receives the signal, confirming the remote has been paired successfully.

Low battery alert: If the LED flashes during normal operation, the battery is running low and should be replaced.

4. Maintenance and safety notes

Power supply: Use only batteries of the type specified for this device and replace both batteries at the same time. Insert them with the correct polarity as shown inside the battery compartment. Do not mix old and new batteries or batteries of different types.

Battery safety: Do not disassemble, puncture, crush, short-circuit, or expose batteries to fire, heat, or direct sunlight. Remove the batteries if the device will not be used for an extended period. Dispose of used batteries in accordance with local regulations; do not dispose of them with general household waste.

Installation: This device is designed to be carried on your person rather than mounted. Attach it to your keys using the supplied key ring, or keep it in a bag or pocket within easy reach, so you can arm, disarm, switch to Home mode, or trigger an SOS alert quickly when needed. Keep it within the alarm host's rated RF range whenever you need to use it, and be mindful that it can be triggered accidentally if a button is pressed while in a bag or pocket. Consider pairing a spare remote with the alarm host and keeping it in a safe place in case the primary remote is lost or damaged.

Operating environment: The device is designed for indoor use only. Do not expose it to rain, condensation, high humidity, dust, or temperatures outside the range stated in the product datasheet. Keep the device away from direct sunlight and heat sources.

Cleaning: Wipe the device with a soft, dry cloth only. Do not use solvents, abrasive cleaners, or aerosol sprays, and never immerse the device in water.

Wireless connection: Keep the remote controller within the alarm host's rated RF range, and away from thick walls, metal surfaces, or major sources of interference, to ensure alarm signals reach the host without delay. Replace the battery promptly if the LED indicates a low-battery warning.

Servicing: The device contains no user-serviceable parts. Do not attempt to open or repair the device yourself, as this may damage it and will void the warranty. If the device is faulty, contact Partizan support using the details below.

Limitations: This remote controller is a supplementary security accessory and is not a certified life-safety alarm system. It should not be relied upon as the sole means of protection in situations where failure to transmit a command could result in injury, loss of life, or serious property damage.
